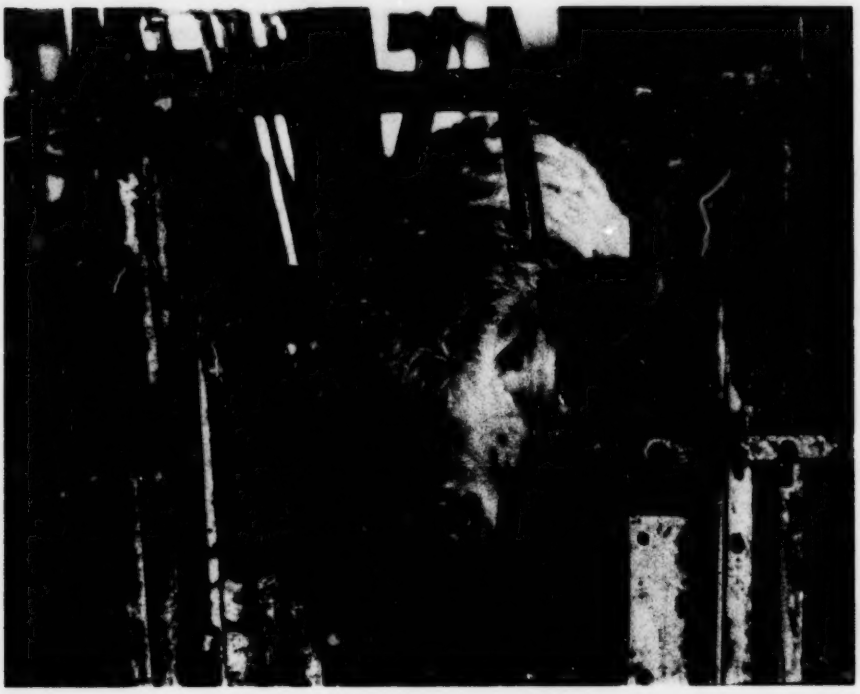
INTRODUCTION

Interest in performance testing ran high throughout the province for entering bulls at test stations and purchasing tested bulls. A total of 688 bulls were enrolled at the Manitoba, Maine-Anjou, Limousin and Red Power Bull Test Stations. Participation trends are documented for a seventeen year period on page 6.

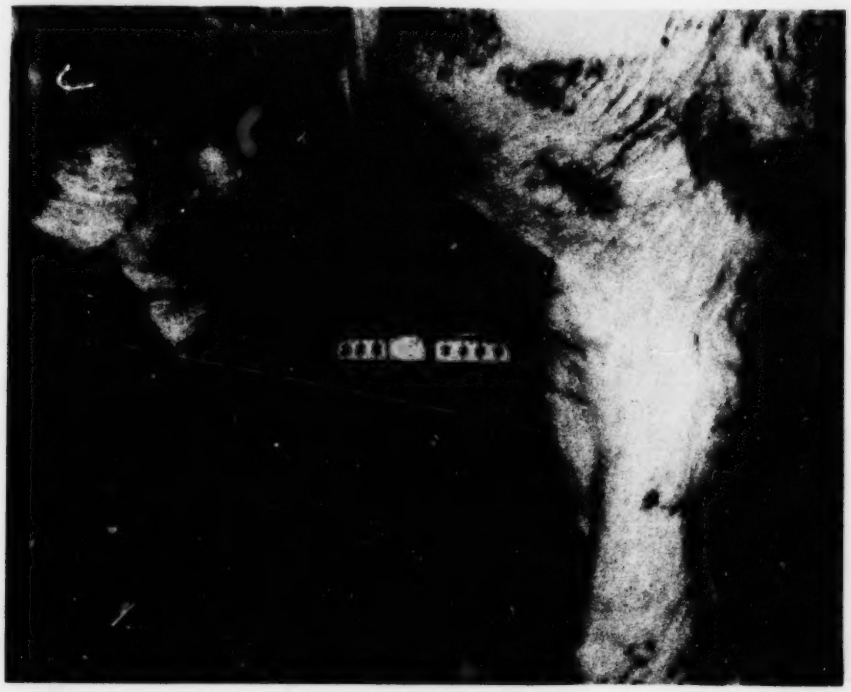


There was a strong demand for tested sires, with all stations reporting very good sales despite the poor economic conditions. A total of $515,450 was generated from sales at the end of test. Top dollars were paid by many repeat buyers. The average price for the 285 bulls sold was $1,809. Complete sale results, including summaries are also included within.

The test consists of recording the weight gained by each bull over a 140 day period. Weights are compared or indexed against the weights of others of the same breed at the same station. Start and end of test weights are taken on two consecutive days with the average used as the official weight. This is done to reduce the potential of recording an inflated or deflated figure due to daily fill. Prior to beginning test bulls are managed under standard conditions for 28 days. This allows the bulls to adjust to the ration and the surroundings. It also reduces the effect of different pre-station feed and management systems.

Weight gain, is the most important trait measured at the test stations. Differences in performance can be attributed to the genetic ability of the bull as nutrition and environment are held constant and animals are compared within breed. The age difference between bulls is no more than 90 days.

Bulls which meet minimum scrotal measurement standards and pass a veterinary inspection for health and scrotal soundness are offered for sale at the end of test.



In this way stations promote the use of top performing and reproductively superior bulls for both purebred and commercial cattlemen. To further encourage the use of these tested bulls Manitoba Agriculture selects the top individuals within a breed for progeny proving.

Bulls which qualify for 1982 are identified in the individual bull listings with the Triple P logo, "PPP".

The test stations operate independently with the choice of rations and management practices decided by each association. A more complete description of the systems is included with the results from each test station. All groups were advised to follow the uniform testing procedures as outlined by the National Advisory Board for Beef Cattle Improvement. Manitoba Agriculture staff assisted each station by providing technical information on performance testing and supervising and assisting when the bulls were weighed.

Gains differ between stations and breeds which is attributed to growth potential of the breed, rations and management systems.

Calculation procedures are documented on page 7. The figures may vary slightly from those produced by the test stations. The differences are due to computer rounding off.

CALCULATIONS

Weight per day of age in pounds (W/D/A) = $\frac{\text{Weight (lb.)}}{\text{Age in days}}$

W/D/A Index = $\frac{\text{W/D/A (lb.)}}{\text{Average W/D/A of the breed group}} \times 100$

Average Daily Gain in Pounds (A.D.G.) = $\frac{\text{Total 140 day weight gain on test}}{\text{140 days}}$

A.D.G. Index = $\frac{\text{A.D.G.}}{\text{Average A.D.G. of the breed group}} \times 100$

Estimated yearling weight (lb.) = End of Test W/D/A x 365 days

Adjusted Scrotal Circumference (Adj. S.C.) to 365 days =
Actual S.C. + Breed correction factor (365 days - age in days)

Breed correction factors for bulls:

348 to 365 days of age		366 to 438 days of age
.04699	Maine Anjou	.02989
.03740	Angus	.00294
.14770	Shorthorn	.00201
.01370	Hereford	.01949
.03335	Simmental	.01367
.05894	Charolais	.02276
.02162	Other	.01203

Backfat Backfat thickness is measured using ultrasonic equipment. Fat cover is read 50 mm off the midback at the leanest spot on the fourth quadrant between the 11th and 12th ribs.

Scrotal Circumference Testicular measurements were taken by a veterinarian at the end of test.

Sale Qualifications Sale qualifications are established by each test station. It is generally recommended that:

- bulls index 95 or greater for both average daily gain and weight per day of age.
- minimal scrotal circumference of 32 cm adjusted to 365 days of age.
- physically and structurally sound including the absence of any reproductive abnormalities.

Home Test ROP Home Test Data has been included on bulls where available.

MANITOBA BULL TEST STATION

The Manitoba Bull Test Station located at Douglas is owned and operated by the Manitoba Beef Cattle Performance Association. The Board of Directors are listed on the following page. The association employs one full time manager, Ritchie Bickford and part time help when necessary.

A total of 508 bulls started test November 30 and December 1. To minimize management problems bulls entering the station were required to weigh a minimum of 400 pounds or have a weight per day of age of 2.1 pounds per day.

Bulls received a concentrate ration consisting of:

70% oats - steam rolled

11% barley - steam rolled

10% beet pulp - pelleted

2% liquid molasses

7% 32% - canola pelleted supplement

The total yardage costs for the 140 day test was $132 per bull.

Contributors were eligible for a $50 grant from Manitoba Agriculture which was applied against yardage costs. To receive the grant bulls had to have weaning weight information.

The association held their eighteenth annual sale May 1st at the Douglas facilities. As a promotional feature the association offered a buyers draw for

a free bull. The winners of the draw were D. McKay, Elm Creek and D. Lyle McKay, Glenella for Lot 117 bull sold to them for $1,800. The sale was financed by charging 3½% commission.

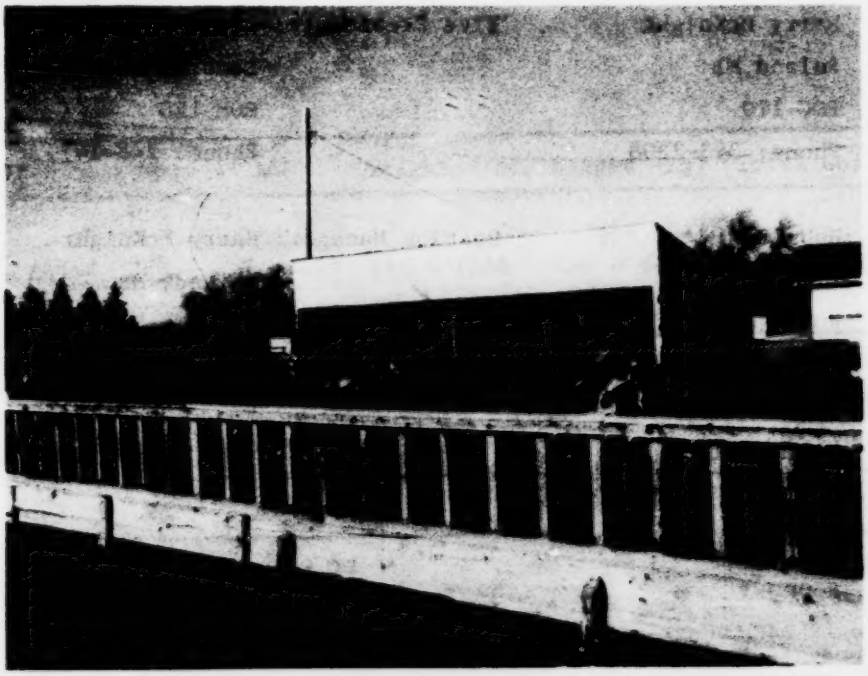
MANITOBA MAINE-ANJOU ASSOCIATION

BULL TEST STATION

The Manitoba Maine-Anjou Bull Test Station successfully completed a second year of performance testing bulls at the McKnight farm at Roland. The test began November 26th and 27th with 50 bulls.

Corn silage and screenings at 12% and 8% protein respectively plus barley and supplement made up the winter ratio .



Per bull consumption for the month of March was as follows:

corn sillage	658	lb (298 kg)	@	$ 12.15
corn screening	173	lb (79.5 kg)	@	7.35
barley	301.6	lb (136.8 kg)	@	25.64
supplement & bedding	93	lb (42 kg)	@	18.07
Total				$ 63.23

Total yardage for the 140 day test period was $42 per bull.

Top performing bulls were offered for sale April 24th at Virden. A commission of 6% was charged. Clipping and trucking services were also available at $50 and $15 respectively.

The executives of the Association are as follows:

RED POWER BULL TEST STATION

Members of the Red Angus Association held the second bull performance test at the farm of Ron Wittshire at Miniota. The 72 bulls starting test November 23rd and 24th were separated into two age groups for indexing. There were 38 bulls included as Red Angus I which were born between January 1 and March 11. There were 34 born between March 13 and May 12th, identified as Red Angus II.

The winter ration consisted of slough hay and tame millet fed as round bales and an oat concentrate ration. For the first 14 days, bulls received dry rolled oats. They then consumed 277 kilograms (610 pounds) of concentrate which consisted of 78% oats, 10% barley, 5% beet pulp, 5% supplement and 2% molasses. The cost of the concentrate was 54 cents per bull per day. Yardage fees amounted to $84 for the 140 day test period.

Scrotol measurements were taken for sale bulls only. Hip heights, which are not included in this report, were taken throughout the test.

Thirty eight bulls were sold at the end of test sale in Brandon on May 2nd. The commission, which included advertising costs, was 9.6%.

Executive of the Manitoba Red Angus Association include:

President: Ron Wittshire
Miniota, MB
ROM 1MO
Phone: 567-3769

Station Manager: Charlie Simpson
Brookdale, MB

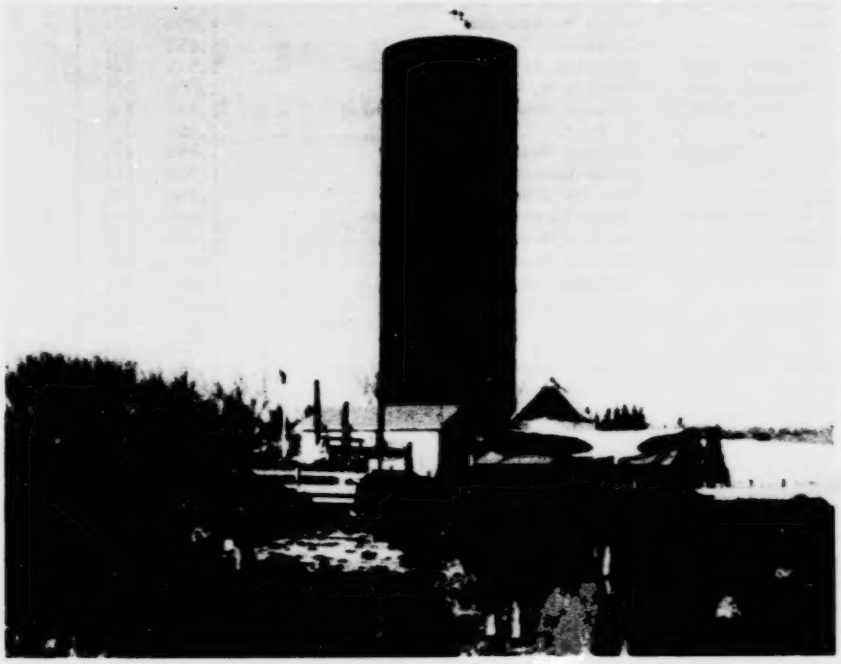
MANITOBA LIMOUSIN ASSOCIATION

BULL TEST STATION

Members of the Manitoba Limousin Association established a test station at the farm of Rodger Mawer, Alexander, to select bulls for reasonable gain on a good growing ration. Fifty-eight started test November 5 and 6th.



A ration consisting of 71% grain (rolled oats and barley) and 29% haylage was fed. The alfalfa haylage was 17% protein and 37% dry matter. Yardage fees, which included all feed, bedding and veterinary expenses were $380.00 per bull for 180 days.

Performance data were indexed in two groups according to the genetic make up of the bulls. Limousin I were 94 - 100% pure bred and full blood. Those 75 to 88% were classified as Limousin II.

The end of test sale was held in Brandon on April 10th. A commission of 8% of the selling price was charged to producers.

The bull test station executives include:

Lloyd Atchison
Pipestone, MB
ROM 1TO
Phone: 857-2947

Ron Sangston
Kenton, MB
ROM OZO
Phone: 838-2472

Rodger Mawer
